

This project, with the research and big data exposure I received from it, was a critical part of my graduate assistantship at TTI as well as my Master of Science program at Texas A&M University. In the course of this project, I gained data-analysis experience coding in two languages: R and SAS. My master's thesis was based on the data set we received for this project, and I was able to apply some of the analysis and writing skills to my thesis that I gained over the course of the project. Additionally, I was chosen to present a poster based on this project at the 2019 Transportation Research Board Annual Meeting in Washington, DC.

Jayson Stibble, Master of Science; Texas A&M University
