

This project has helped me to gain experience using video reduction software such as Hawkeye to study a current problem in transportation. The problem that I observed while going through the videos in Hawkeye, improper use of automated driving systems, is something that I learned about while taking the course "BME 5984 - Advanced Vehicle Safety Systems." This project has allowed me to get a first-hand look into real-world scenarios and the safety concerns regarding advanced vehicle technology, and has helped me to understand even more why it is important for new laws and regulations to be put into place so that new technologies can continue to be released onto the roads without causing additional safety concerns

Thanks, Safe-D,

Adam Novotny
