

This project helped me advance my programming skills and data analysis knowledge. Improving my knowledge in statistics helped me develop a new standardized performance measure that could be used on corridors with different length corridors. Moreover, to write the report and produce the graphs in SAFE-D template, I learned advanced graph production skills in R language.

My dissertation had a similar structure to this project and conducting this project helped me learn how to plan and construct a better data structure. During this project I also advanced my knowledge on data cleaning and data analysis. Preparing quarterly and annual reports and the final report taught me how to collaborate with other team members and improved my writing skills.

Thank you, Safe-D

Maryam Shirinzad
