

Aniruddha successfully defended his master's thesis with a degree in Mechanical Engineering. After this he is planning to pursue a PhD. Degree in the same field. This research project has helped him in learning finite element analysis and understand the crash analysis between vehicles through computer simulations. This project helped him in applying the concepts of Finite Element Analysis that he has studied in his graduate course work. Overall, this project helped him in learning practical experience of education which would have been difficult just from the coursework in the degree plan.

Thank you, Safe-D
