Vincent O'Hara-Rhi: This project was the one that generated data for Vincent's MS thesis. Throughout this project, Vincent has been provided with the opportunity to learn machine learning and advanced GIS skills as well as the fundamental concepts around flooding impacts on transportation systems and flood control strategies. In addition, this project has provided Vincent with mentorship to excel his scientific communication skills.

Callum McRae: This project engaged Callum as an undergraduate student and provided training for him to perform advanced GIS analyses and scientific reporting. It resulted in a peer-reviewed journal publication co-authored by Callum, and has made him enthusiastic to pursue his studies towards an MS degree in this field.
